ABOUT STANDEX

Customer Focused Engineering Solutions. “Innovating for more than 50 years.”

The Standex Electronics business, a division of Standex International Corporation (NYSE:SXI), has been providing solutions through high-performing products since the 1950’s. Through growth, acquisition, strategically partnering with customers, and applying the latest engineering designs to the needs of our ever-changing world, Standex Electronics technology has been providing quality results to the end-user. The approach is achieved by partnering with customers to design and deliver individual solutions and products that truly address customers’ needs.

Standex Electronics is headquartered in Cincinnati, Ohio, USA, Standex Electronics has nine manufacturing facilities in six countries, located in the United States, Germany, China, Mexico, the United Kingdom, and Japan.

That's **Standex** | Smart.

WHO WE ARE / WHERE WE PLAY

Powerfully transforming. “When failure is not an option, designers of critical electronic components rely on Standex and their decades of experience.”

Standex Electronics is a worldwide market leader in the design, development and manufacture of reed switch and sensor solutions. Our sensor solutions include Meder, Standex and KOFU (formerly OKI) brand reed switches, as well as a complete portfolio of reed relays, and a comprehensive array of fluid level, proximity, motion, water flow, HVAC condensate,

hydraulic pressure differential, capacitive, conductive and inductive sensors. Our work, growth, and dedication to providing reliable high-quality products through our engineering and manufacturing expertise go beyond products we ship. We offer engineered product solutions for a broad spectrum of product applications in all major markets, including but not limited to:

- Aerospace & Military
- Alternative Energy
- Automotive & Transportation
- Fluid Flow
- Food Service
- General Industrial
- Heavy Duty Truck
- Household & Appliances
- HVAC / R
- Hydraulics
- Industrial & Power
- Lighting

- Medical
- Metering
- Off Highway
- Pool & Spa
- Recreational
- Security & Safety
- Space
- Test & Measurement
- Utilities & Smart Grid

Our values and what we believe align to the partner, solve, and deliver® approach. We produce parts but we are more than that. Connecting with your team as a strategic partner, listening to your challenges, and arriving at ways to solve your complex problems through our solutions are why we exist. We have custom capabilities that address your needs. Our team leverages our dynamic and diverse engineering expertise and other resources such as our global facilities for logistics and production.

TOOL SHOP - MACHINERY, TOOLS & ASSEMBLY

Tool Shop - Machinery & Equipment, Tools & Assembly Services

Standex Electronics' tool shop was established in 1996, as a result of the growing demand for high precision quality tooling for our Reed Products as well as a means of expanding our customer service offering. Our qualified tool shop is a reliable partner providing customer support in the areas of planning, designing and constructing molding tools, punching tools and smaller pressure die-casting tools. Whether single piece or mass production tooling, a team of highly motivated and qualified employees will work with you to design

and construct the tooling that is according to your specifications as agreed upon in the form of a written quotation. The most advanced techniques will be utilized in milling, wire eroding, die sinking and grinding, as well as a select grade of steel in connection with the ideal coating will be used to guarantee that the best quality and durability is achieved for the longest life of the tool. In general, sampling, optimizing and in-house maintenance are provided for all tooling as well as first sample and failure analysis reporting.

REED SWITCH TECHNOLOGY

Standex Electronics is the world's largest manufacturer of reed switches (>700M/yr) with >50% market share offering the most comprehensive listing of reed switches that cover the majority of low power switching requirements. Because reed switches are hermetically sealed (glass to metal seal) they are impervious to almost all environments. This opens up a vast number of applications where they are the only technology capable of meeting specific requirements where certain mechanical switches and semiconductor switches are environmentally limited.

Reed relays and reed sensors both use the reed switch as the heart of their switching mechanism. New applications continue to arise at a significant pace for both products because of the reed switch's unique switching capability. What is driving these new applications is the ever broadening of new reed relay, reed sensor and fluid level designs by Standex Electronics. Our solutions include KOFU (formerly OKI Sensor Device Corp.), MEDER and KENT brand reed switches...

“Standex offers the most comprehensive listing of reed switches that cover the majority of low power switching requirements”

KOFU REED SWITCHES

- Largest global production volume >500M/yr
- Widest product range 7mm - 21mm
- Highest industry quality/long life
- Suitable for high-rel automotive & ATE
- Meet high voltage/breakdown requirements

MEDER REED SWITCHES

- Mechanized manufacturing in Germany
- World's smallest 3.95mm
- Unique flat blade ideal for surface mounting
- High voltage vacuum version now available

KENT REED SWITCHES

- Manufactured in the UK
- Clear glass 12.7mm - 20mm glass
- Highly automated, lowest industry cost
- Industrial grade- security, appliance, consumer

The Reed Switch was first invented by Bell Labs in the late 1930s. However, it was not until the 1940s when it began to find application widely as a sensor and a Reed Relay. Here it was used in an assortment of stepping/switching applications, early electronic equipment and test equipment. In the late 1940s Western Electric began using Reed Relays in their central office telephone switching stations, where they are still used in some areas today. The Reed Switch greatly contributed to the development of telecommunications technology.

Over the years several manufacturers have come and gone, some staying longer than they should have, tainting the marketplace with poor quality, and poor reliability. However, most of the manufacturers of Reed Switches today produce very high quality and very reliable switches. This has given rise to unprecedented growth.

Today Reed Switch technology is used in all market segments including: test and measurement equipment, medical electronics, telecom, automotive, security, appliances, general purpose, etc. Its growth rate is stronger than ever, where the world output cannot stay abreast with demand.

As a technology, the Reed Switch is unique. Being hermetically sealed, it can exist or be used in almost any environment. Very simple in its structure, it crosses many technologies in its manufacture. Critical to its quality and reliability is its glass to metal hermetic seal, where the glass and metal used must have exact linear thermal coefficients of expansion. Otherwise, cracking and poor seals will result. Whether sputtered or plated, the process of applying the contact material, usually Rhodium or Ruthenium, must be carried out precisely in ultra clean environments similar to semiconductor technology. Like semiconductors, any foreign particles present in the manufacture will give rise to losses, quality and reliability problems.

Over the years, the Reed Switch has shrunk in size from approximately 50 mm (2 inches) to 3.9 mm (0.153 inches) or less. These smaller sizes have opened up many more applications particularly in RF and fast time domain requirements.

ELECTRICAL & MECHANICAL BENEFITS

Ability to switch up to 10,000 Volts

Ability to switch currents up to 5 Amps

Ability to switch or carry as low as 10 nanoVolts without signal loss

Ability to switch or carry as low as 1 femtoAmp without signal loss

Ability to switch or carry up to 7 GigaHz with minimal signal loss

Isolation across the contacts up to 10^{15} W

Contact resistance (on resistance) typical 50 milliOhms (mW)

In its off state it requires no power or circuitry

Ability to offer a latching feature

Operate time in the 100 ms to 300 ms range

Ability to operate at extreme temperature ranges from -55°C to 200°C

Ability to operate in all types of environments including air, water, vacuum, oil, fuels, and dust laden atmospheres

Ability to withstand shocks up to 200 G

Ability to withstand vibration environments of 50 Hz to 2000 Hz at up to 30 G

Long life with no wearing parts, load switching under 5 Volts at 10 mA, will operate well into the billions of operations

OUR PRODUCTS ARE RECOGNIZED*

Tested in accordance with AEC-Q200

In compliance with UL, CSA, EN60950, VDE, BAPT 223ZV5, ATEX & IECEx, RoHS, REACH (*not applicable to all products)

REED SWITCH SELECTION GUIDE

“Standex has the expertise and specialized equipment to ensure the highest quality during the custom reed switch manufacturing process.”

Standex Reed Switches can be customized for your design needs. Some customization includes sorting specific magnetic sensitivity pull-in ranges and cutting and/or bending the Reed contact leads for either horizontal or vertical surface mount applications or other special mounting requirements. All GR/GP, KSK and ORD Reed Switch series with normally open, normally closed or SPDT switching functions can be customized. Various different pad layouts, length of soldering pin and magnetic sensitivity class are standard options when it comes to customizing a reed switch.

In addition to these standard options, we can also customize any switch to your own design including many value add services such as PCB assembly, epoxy sealing, conformal coating, wire termination and much more. Custom switches can also be supplied in tape and reel or other desired packaging. Standex has the expertise and specialized equipment to ensure the highest quality during the custom reed switch manufacturing process.

CUSTOM SENSORS

“Complex problems deserve custom solutions”

Standex Electronics incorporates our magnetic reed switches into a wide variety of custom proximity sensors and switches. The reed sensors come in hundreds of different sizes and shapes to meet a multitude of different application requirements. Customers have the opportunity to work with our engineers to design or select the best packaging concept that will line up with their application.

Our unique and patented production process allows us to produce not only very small reed switches, but when we incorporate these into proximity sensors the result is a small sensor with big performance impact.

These ultra-miniature components allow big improvements in the performance of diverse products within medical devices, security systems, safes, and industrial control applications.

SENSING TECHNOLOGIES

Customer Focused
Engineering
Solutions

reed

- No power required
- Reliable 2-wire device
- High-end sensing applications
- World leader in reed technology/applications

TYPES OF SENSORS

- Proximity
- Push Button
- Fluid Flow
- Pressure Differential
- Metal Detection
- Fluid Level

hall effect

- Advanced outputs over reed on / off
- Ideal for speed sensing
- Power consumption in low mA

TYPES OF SENSORS

- Proximity
- Angular
- Fluid Level
- Linear
- Speed
- Fluid Flow

magnetostrictive (AMR, GMR & TMR)

- Highest sensitivity
- Very low power consumption
- High accuracy over wide temperature range

TYPES OF SENSORS

- Proximity
- Angular
- Fluid Level
- Linear
- Speed
- Fluid Flow

conductive

- Solid state reliability
- Measure fluid quality (WIF, Salinity, etc.)
- Patented false full and electrolysis protection

TYPES OF SENSORS

- Fluid Level
- Fluid Quality

combo

- Combine any of our sensing technologies and temperature together for multi-sensing / smart sensing

TYPES OF SENSORS

- Various technologies

capacitive

- Continuous analog output for fluid level sensing
- Solid state solution with no moving parts
- Capable of working over a wide temperature range

TYPES OF SENSORS

- Fluid Level

inductive

- Non contact metal detection
- Ideal in applications with small changes in position
- Solid-state reliability

TYPES OF SENSORS

- Proximity
- Metal Detection

REED SENSORS

MK24 - $\frac{B}{1}$ - $\frac{0}{2}$ - $\frac{0E}{3}$

Surface Mount (SMD)

Rated Power Max. 3W/30VDC/0.3A | Operating Range 5-30 AT | Contact Form A, B

- Sensitivity Range AT: A=5-10, B=10-15, C=15-20, D=20-25, +5AT spans
- Lead Design: 1 (Axial), 2 (Gull-Wing), 3 (J-Lead)
- Option: Contact Form B (Normally Closed)

Highlights

- On/Off control switch, position detection
- Portable medical device, white goods, telecomm, security
- Supplied in tape and reel according to IEC 286 / part 3
- Worlds smallest SMD reed sensor

MK31 - $\frac{B}{1}$ - $\frac{3}{2}$

Surface Mount (SMD)

Rated Power Max. 3W/30VDC/0.3A | Operating Range 5-30 AT | Contact Form A

- Sensitivity Range AT: B=10-15, C=15-20, D=20-25, ...+5AT increments
- Lead Design: 3 (J-Lead)

Highlights

- On/Off control switch, position detection
- Portable medical device, white goods, telecomm, security
- Supplied in tape and reel according to IEC 286 / part 3
- J-lead, UL

MK23 - $\frac{000}{1}$ - $\frac{0}{2}$ - $\frac{0}{3}$

Surface Mount (SMD)

Rated Power Max. 100W/1000VDC/1A | Operating Range 10-60 AT | Contact Form A, C

- Switch Model: 35, 46, 52, 66, 80, 85, 87, 90 (Form C), 501
- Sensitivity Range AT: B=10-15, C=15-20, D=20-25, ...+5AT increments
- Lead Design: 1 (Axial), 2 (Gull-Wing), 5 (Helix)

Highlights

- On/Off control switch, position detection
- Telecomm, white goods, industrial, security
- Supplied in tape and reel according to IEC 286 / part 3
- Axial, Gull-Wing, inverse Gull-Wing, or helix lead, UL

MK17 - $\frac{B}{1}$ - $\frac{0}{2}$

Surface Mount (SMD)

Rated Power Max. 10W/170VDC/0.25A | Operating Range 10-40 AT | Contact Form A

- Sensitivity Range AT: B=10-15, C=15-20, D=20-25, ...+5AT increments
- Lead Design: 1 (Axial), 2 (Gull-Wing), 3 (J-Lead)

Highlights

- On/Off control switch, position detection
- Portable medical device, white goods, telecomm, security
- Supplied in tape and reel according to IEC 286 / part 3
- Axial, Gull-Wing or J-lead, UL

Note: All dimensions are in mm and tolerances according to ISO 2768-m. MK22 - $\frac{B}{1} - \frac{Q}{2}$

Surface Mount (SMD)

Rated Power Max. 20W/200VDC/1.0A | Operating Range 10-30 AT | Contact Form A

- Sensitivity Range AT: B=10-15, C=15-20, D=20-25, ...+5AT increments
- Lead Design: 1 (Axial), 2 (Short Gull-Wing), 4 (Long Gull-Wing)

Highlights

- On/Off control switch, position detection
- Portable medical device, white goods, telecomm, security
- Supplied in tape and reel according to IEC 286/part 3
- Axial or Gull-Wing lead, UL

MK16 - $\frac{B}{1} - \frac{Q}{2}$

Surface Mount (SMD)

Rated Power Max. 10W/200VDC/0.5A | Operating Range 10-60 AT | Contact Form A

- Sensitivity Range AT: B=10-15, C=15-20, D=20-25, ...+5AT increments
- Lead Design: 1 (Axial), 2 (Gull-Wing)

Highlights

- On/Off control switch, position detection
- Portable medical device, white goods, telecomm, security
- Supplied in tape and reel according to IEC 286/part 3
- Axial or Gull-Wing lead, UL

MK23 - $\frac{501}{1} - \frac{B}{2} - \frac{Q}{2}$ "Helix"

Surface Mount (SMD)

Rated Power Max. 10VA/200VDC/0.5A | Operating Range 7-30 AT | Contact Form A

- Sensitivity Range AT: B=10-15, C=15-20, D=20-25, E=25-30
- Lead Design: 5 (Helix)

Highlights

- On/Off control switch, position detection
- Telecomm, white goods, industrial, security
- Supplied in tape and reel according to IEC 286/part 3
- Axial or Helix lead, UL

MK15 - $\frac{B}{1} - \frac{Q}{2}$

Surface Mount (SMD)

Rated Power Max. 10W/200VDC/0.5A | Operating Range 10-60 AT | Contact Form A, B

- Sensitivity Range AT: B=10-15, C=15-20, D=20-25, ...+5AT increments
- Lead Design: 1 (Axial), 2 (Gull-Wing)

Highlights

- On/Off control switch, position detection
- Telecomm, white goods, industrial, security
- Supplied in tape and reel according to IEC 286/part 3
- Axial or Gull-Wing lead, high power switch, UL

Note: All dimensions are in mm and tolerances according to ISO 2768-m. A Reed Switch requires either a permanent magnet or magnetic field in order to activate the switch, thus it is commonly called a magnetic reed switch. Magnets have reversible and irreversible demagnetization specifications. Engineers should consider shock, vibration, strong external magnetic fields as well as high

temperatures in their designs. All these factors influence the magnetic force and the long term stability in different ways. Preferably the magnet is mounted on the moving part of the application. Professional tuning of the magnet and reed switch pairing can improve the functionality of the whole sensor-magnet system. We offer permanent magnets in various standard housings for quick mounting or as is.

We offer the following types of permanent magnets:

- AlNiCo (Aluminum Nickel, Cobalt, Iron and Titanium)
- SmCo (Samarium–Cobalt) & NdFeB (Neodymium) - rare earth
- Hf - hard ferrite

These are some of our most widely used models, others available as required.

HALL EFFECT SENSORS

Standex Electronics' Hall Effect Sensor series offer **solid state reliability**, **low power consumption**, and consistent activation points over a wide temperature range in a rugged and environmentally isolated package.

Micro-Power versions operate on 2.5-3.5V battery voltage with only 5µA average supply current vs. the industry average of 5mA.

Custom options include: output- switch, latch, etc., high temperature resistance, package design and much more.

FLUID SENSORS & FLOATS

Standex Electronics supplies fluid level sensors that use a wide range of technologies - from magnetic Reed Switch technology to conductive technology. Standex Electronics designs fluid level sensors that are appropriate for each individual application. From basic sensors which are driven by external electronics to turnkey sensor systems with switched outputs, Standex Electronics delivers solutions to the most demanding fluid level sensing applications.

CUSTOM FLUID LEVEL & FLOW SENSORS

“Complex problems deserve custom solutions”

The fluid level reed sensors sense level changes in liquid in an assortment of liquid mediums. The sensors generally have an attached float with an embedded magnet that moves up and down on an encased stem where the reed switches are housed. The reed switches will change their closure state when the float comes within their magnetic influence. The closure initiates a sequence of events alerting the change of the liquid level.

We offer an extensive selection of different reed sensor packages, switch configurations, stem lengths, float density sensitivities allowing for diverse applications. Our engineers are ready to match custom designs to stringent requirements.

Our reed sensors are used in the automotive industry to measure fuel, oil, brake fluid, radiator, windshield washer level, and other fluids. They are also found in recreational vehicles, such as jet skis, sensing oil and fuel levels. Wherever a liquid exists or can accumulate, Standex Electronics offers a sensing solution.

HVAC/R Series Flood Prevention Switches -Reed Technology

Truly Reliable, Plug-N-Play and Hassle Free

Standex Electronics provides the HVAC industry with high performing Flood Prevention Switches (FPS's) that are easy to install and service. Our expertise and capabilities allow for reliable innovations that prevent overflowing that causes damage to floors, walls, ceilings and the like. For example, if water levels in the auxiliary or main drain pipe

rose due to a clogged air conditioning condensate, the switch shuts off the system.

Pressure Differential Sensors - Reed Technology

Differential pressure sensors are utilized in the hydraulics industry to alert equipment operators that their hydraulic fluid filter has reached the end of its life. Standex Electronics designs and

manufactures many configurations of these "filter bypass" sensors with options for custom connection methods, varying trip and reset pressures, NO/NC/SPDT switch configurations, mounting and sealing to the filter head. The hermetically sealed reed switch contacts are more reliable in these applications than other technologies such as open mechanical contacts, visual pop-up indicators, or

snap action switch assemblies. The contact quality, switching life and non-intrusive sensing arrangement of reed switches increases indicator reliability. We partner with the customer to design and validate the custom indicators to specific OEM requirements, often creating a proprietary product line for each customer.

Fluid Level Sensors - Conductive Technology

Standex Electronics manufactures state-of-the-art conductive liquid sensors that detect changes in levels without the use of a float. These sensors are used generally in water based conductive fluids when the application cannot use a float based system. Our conductive fluid level sensors have a patented false full protection and current level shift

to indicate fluid level. They guard against electrolysis and conduction paths along the sensor packaging with high quality performance. Applications include the measurement of syrups and juices in the food industry, measurement of liquid soaps in washing applications, liquid waste products, storm drains, bilge pumps, sump water, and many other functions.

Flow Sensors - Reed Technology

Standex Electronics designs and manufactures custom reed switch and magnet based flow switches for specific customer applications. The designs often include harsh environments, significant durability requirements, and precise flow rate switching. Designs can be intrusive or non-intrusive with multiple custom packaging options for terminating and wiring and add-ons for temperature sensing, salinity, and multiple trip points.

Utilizing our vast experience in reed switch application engineering, mechanical packaging, and related manufacturing process, Standex Electronics provides quality flow switching products for markets such as home appliances and pool/spa.

Advanced Fluid Level Sensors - Hall Effect & Capacitive Technology

Standex Electronics Solid State Hall Effect Level Sensors (HLS) and Capacitive Level Sensors (CLS) are

custom designed solutions for continuous fluid level monitoring. These smart sensors have an integrated onboard microcontroller with calibrated and programmable output for various tank geometries. Our patent pending & revolutionary designs can be configured in either engineering plastic or stainless-steel housings with PP, PA, NBR, and stainless floats as well as multiple mounting options.

FEATURES

- Full scale accuracy up to $\pm 2\%$
- High resolution better than 1mm (HLS)
- Solid-state reliability in harsh environments
- Custom length continuous liquid level sensing
- For fuel, oil, water, ethanol blends, diesel, urea, etc.
- Onboard electronics analog output 0-5V or 4-20mA
- Wide operating temperature -40°C to $+125^{\circ}\text{C}$
- Can meet IP67 requirements
